

Mostafa Mohamed Mostafa Ibrahim Sallam

Cairo, Egypt — mostafa.sallam.dev@gmail.com — +20 109 324 3959 — LinkedIn — Citizenship: Egyptian

TECHNICAL SKILLS

- Java EE/SE
- Spring Boot
- Spring Security
- SQL / NoSQL / PostgreSQL
- Multi-threading & Concurrency
- Unit Testing (JUnit, Mockito, Selenium)
- Docker & Containerization
- CI/CD (Ansible)
- Reactive Programming
- Quakers and panache

PROFESSIONAL EXPERIENCE

National Bank of Kuwait (NBK)

Java Backend Developer

Cairo, Egypt
October 2025–Present

- Developed a secure signature retrieval feature allowing users to view client signatures from a centralized signature repository via controlled access links which follows the **highest security standards**.
- Implemented strict access control mechanisms to prevent unauthorized viewing of sensitive client signature data.
- Led the design and implementation of the **Electronic Payment Plan (EPP)** system, including database schema design, database creation, and backend business logic.
- Extended Temenos T24 capabilities by integrating **JasperReports** for dynamic report generation.
- Developed a **No-File Inquiry** feature using Java on **Temenos T24 R22**, improving data accessibility and operational efficiency.
- Developed a robust **name matching engine** using fuzzy matching techniques (e.g., Levenshtein distance and phonetic similarity algorithms) to improve client identity matching accuracy for banking operations such as KYC and compliance checks.

Governance House Technology (GHT)

Java Backend Developer

Cairo, Egypt
July 2024–September 2025

- Led the customization and productization of the open-source jBPM engine, transforming it into GH-BPM — a deployable BPM solution used by the company and its clients.
- Extended jBPM to support multilingual form rendering (Arabic, French, and English) using Java EE and Spring Boot, enabling fully localized workflow execution.
- Developed and integrated AI-powered translation services via Spring APIs and RPC, reducing manual form localization time from 2 hours to under 5 minutes.
- Integrated JasperReports into GH-BPM for dynamic, multilingual PDF generation, reducing report creation time from 3 hours to 10 minutes.
- Integrated the OpenKM Document Management System with jBPM to automate document storage and retrieval throughout the business process lifecycle.
- Implemented SSO authentication by integrating Keycloak with OpenKM filters and Spring Security.
- Integrated Keycloak with both jBPM and OpenKM to unify authentication across the system.
- Containerized and deployed GH-BPM and OpenKM on WildFly using Docker.
- Designed and implemented complete business workflows for clients such as Bank Al Wehda, including Islamic Murabaha financing, company registration, and Hajj program automation.
- Developed internal reporting and monitoring tools within GH-BPM to support performance tracking and data-driven decision-making.
- Integrated Alfresco CMS to streamline document processing and content management.
- Used Ansible to automate system configuration and deployment on servers.

Vendra Company (Early-Stage Startup)

Backend Engineer / Co-founder (Technical)

Cairo, Egypt
Sep 2023–Dec 2023

- Implemented complex inventory tracking mechanisms including batch-level costing
- Created sophisticated product management with category hierarchies, branch-specific product configurations, expiry date tracking, and comprehensive stock level monitoring.
- Co-founded and architected the backend of an early-stage startup using **Quarkus** with a fully **reactive, non-blocking architecture**.
- Designed and implemented RESTful APIs leveraging **Reactive Programming** (Mutiny) to achieve high throughput and low latency.
- Integrated **reactive database access** using **Hibernate Reactive / R2DBC**, enabling asynchronous persistence and scalable data handling.
- Applied Domain Driven design principles to support future microservices expansion.
- Implemented comprehensive unit testing using JUnit 5, Mockito, and QuarkusTest framework

EDUCATION

German University in Cairo, Cairo, Egypt
B.Sc. in Computer Science

July 2024

PROJECTS

Sales Force ERP Solution Management System

- Designed and built full-stack reactive inventory system using Quarkus and Hibernate Reactive
- Implemented batch-level costing, multi-branch transfers, and real-time stock tracking
- Created comprehensive unit testing suite with coverage using JUnit 5 and Mockito
- Applied DDD principles for scalable architecture supporting complex business workflows

GH-BPM

- Contributed to converting the open-source JBPM engine into a full-fledged enterprise-grade product (GH-BPM), used for business process automation in banking and government sectors

Automated Proctoring System

(Live Demo)

- Led development of AI-powered exam monitoring web app using React.js and TensorFlow.js

Telekinesis Game AI

(GitHub)

- Implemented A* search algorithm achieving 95% optimal pathfinding in grid-based puzzle game
